

EMPLOYEE ATTRITION ANALYSIS & PREDICTION INSIGHTS

Analyzing Employee Data to Identify Key Factors
Driving Attrition

Prepared by Akanksha Jain

OBJECTIVE & KEY GOALS

Objective: This project aims to analyze employee attrition and identify key factors driving employee turnover.

Key Goals:

- Identify attrition trends across department.
- Analyze the impact of overtime on employee turnover.
- Evaluate salary influence on attrition.
- Compare attrition across roles and departments.
- Understand employee behaviour patterns

ATTRITION BY DEPARTMENT

Observations:

- R&D Department shows the highest attrition.
- HR Department has the lowest attrition
- Sales department shows moderate attrition.

Insights:

- High attrition in R&D indicates possible workload pressure or job dissatisfaction.
- HR department appears more stable with better employee retention.

ATTRITION BY AGE

Observations:

- Employees in the age group 25–35 show higher attrition.
- Lower attrition is observed in employees above 40.
- Younger employees are more likely to leave the organization.

Insights:

- Early-career employees may be exploring better opportunities or career growth options.
- Higher attrition among younger employees suggests a need for better career development programs.

ATTRITION BY GENDER

Observations:

- Attrition is slightly higher in one gender group
- Overall difference between male and female attrition is not very large

Insights:

- Gender does not appear to be a major factor influencing attrition.
- The organization shows relatively balanced retention across genders

ATTRITION BY JOB ROLE

Observations:

- Certain job roles (e.g., Sales Executive, Laboratory Technician) show higher attrition
- Some roles have very low attrition rates.

Insights:

- High attrition in specific roles indicates possible job stress, workload, or low satisfaction.
- Roles with repetitive tasks or high targets may have higher turnover.

ATTRITION BY OVERTIME

Observations:

- Employees who work overtime have significantly higher attrition
- Employees with no overtime show lower attrition

Insights:

- Overtime is a strong factor influencing employee turnover.
- Excess workload may lead to burnout and dissatisfaction.

ATTRITION BY MONTHLY INCOME

Observations:

- Employees with lower income levels show higher attrition
- Higher salary groups have lower attrition rates

Insights:

- Salary plays a key role in employee retention.
- Employees may leave for better-paying opportunities.

ATTRITION BY YERS AT COMPANY

Observations:

- Employees with less than 3–5 years of experience show higher attrition
- Employees staying longer tend to remain in the organization

Insights:

- Early tenure is a critical period for employee retention.
- Employees who stay longer are more stable and engaged.

Key Finding & Recommendations

- R&D Department shows high attrition → implement targeted retention strategies and reduce performance pressure.
- High-attrition job roles (Sales Executive, Lab Technician) → provide clear career growth paths and recognition programs.
- Employees working overtime have higher attrition → improve work-life balance and optimize workload distribution.
- Low-income employees are more likely to leave → introduce competitive salaries and performance-based incentives.
- Employees with 0–3 years tenure show higher attrition → strengthen onboarding, training, and early engagement initiatives.
- Younger employees (20–30 age group) tend to leave more frequently → offer skill development and career advancement opportunities.
